Alternative CN splitting without intermediate A[t] values

```
series[CN[A, h / 2, t, t + h][CN[B, h, t][CN[A, h / 2, t, t + h][u0]]] -
    CN[A + B, h, t][u0], {h, 0, 3}]

- \frac{1}{16} h^3 u0 (2 A'[t] ** A[t] + 4 A'[t] ** B[t] + 4 B'[t] ** A[t] - A[t] ** A[t] ** A[t] -
    2 A[t] ** A[t] ** B[t] - 2 B[t] ** A[t] ** A[t] - 4 B[t] ** A[t] ** B[t])
```

This only works due to an internal compenstion, of the follwing second order term:

```
series [CN [A, h / 2, t, t + h] [u0] - CN [A, h / 2, t] [u0], {h, 0, 2}] -\frac{1}{8} h^2 u0 A'[t]
```
